PERSONAL PROJECTS

DETECTION OF POTHoles AND HUMPS

(09/2020 - 03/2021)

- Our project mainly aims at detection of potholes and humps to avoid accidents & at the same time damage to the vehicle. We have used ultrasonic sensors for measuring the depth & height of the road surface. The data which are sensed by the sensors include the depth of the potholes & height of the hump & geographic location which is to be already stored in the database.
